Located on the northeast side of Knight Island, above Bay of Isles

Comments: Provide any clarifying information, including number of fish observed, location of fish survey data, etc. I observed pink salmon spawning in both inlet and outlet streams and in the lake. Approximately 20 five pinks were present in the outlet stream, 25-100 pinks in the lake and 15-20 in the mouth of the inlet stream. I did not walk up the inlet stream to check for more. Numerous dead, washed ashore fish were in all 3 locations

Attach a copy of a map showing location of mouth and upper points of each species, specific stream reaches identified for spawning or rearing, locations of barriers, such as falls. Attach a copy of the fish survey data, if available.
